Employer: Tech Active Solutions Pvt Ltd. (July 2021 - March 2023)

Job Title: Mobile Application Developer

Projects:

BodyCoat Customer App

- This app is based on the Bangalore, KA
- In this app all the car owners can book a slot for cleaning, servicing and repainting for their cars. It is available in most of the malls in the Bangalore city.
- In this also we have given user friendly experience and also they can select their own timings for the services needed.
- Took initiative in learning react native and went on to successfully develop various features under minimal supervision.
- Responsible for design and development of various components such as tab bars, map view, image picker, date picker, push notifications, react navigation features, profile management and navigation using react-native.
- Used Redux and async storage to store state of app in a singular source.

Cabstart Driver

- Cabstart driver is the driver assisting application for the Bolton city, UK.
- This is the real time application where the drivers will get the trips which has been booked by the customers.
- In this we made use of Google maps all functionalities like getting location, showing driver availability using markers.
- Also implemented Room database for the local storage utilisation and while showing the meter we also make use of drawable over other apps to show the distance and time of the trip.
- Implemented Socket.io with Foreground service.
- Implemented new flow of getting Background location permission above Android version 10.
- Used foreground service and Socket.io to get location update from device even if the app gets killed.

Orbit Taxi and Delivery

- Orbit Taxi & Delivery is the customer application for the above mentioned Cabstart driver.
- This is the customer app for the users where they can book their cabs for the instant ride.
- In this we have given the users an attractive and understanding steps to book their taxi with all the safety measures.
- Users can also change their destination location and all the driver details will be shared with them for their safety.
- Also created multiple apps for different tenants with the same code base code using Product flavours.

SMS Gateway App

- This is a small application where we used this app to send SMS for different users.
- In this app we will get the messages from Firebase real time data base and send one by one as SMS to the users.
- In this application also we used foreground service for sending messages.
